Note* For ACT. Filter out test optional cases. Filter out 0 and blanks for ACT variable (total number of cases/4=quartile). Sort ACT from smallest to largest. Copy paste ACT column into a new excel file. Scroll down to the case with the row number that equals a quarter of the total cases. If 23 then scroll to the last reported 23 take its row number-1 since row1 is taken up by the ACT variable name. Divide that number by the total number of cases. Do the same for the first case with that reported value. Whichever is closest to 25% is the one used in the summary.
